NEW

Contractubex
Treating scars successfully

Contractubex® Overnight Intensive Patch

The first scar patch with dual mode of action

1. OCCLUSION

The soft MICRO-AIR-CUSHION SEAL is specially designed to

- ☒ reduce the transepidermal water loss of the scar tissue
- ☒ maintain a balanced, moisture-retaining atmosphere inside the affected skin area
- ☒ protect the sensitive scar tissue

2. RELEASE OF ACTIVE INGREDIENTS

In the ACTIVE-RELEASE-MATRIX in the adhesive layer

- ☒ the well-known Contractubex® substances CEPALIN and ALLANTOIN are embedded
- ☒ substances are gradually released over several hours

REGULATES the scar formation process thus preventing excessive scarring

REDUCES redness, itching and tension

IMPROVES the smoothness, colour and softness of the newly formed tissue

... combined with
Patient-friendly product features

Gel

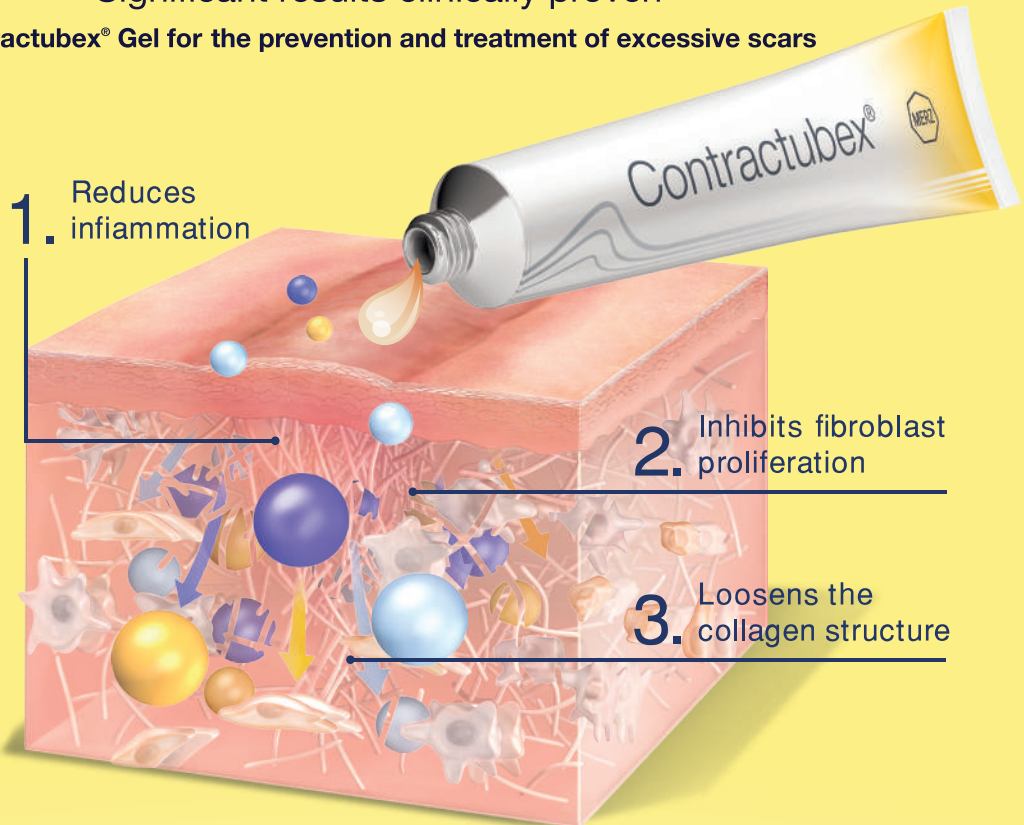

Contractubex

Treating scars successfully

Deep-Acting Scar Gel with Triple Effect

Significant results clinically proven

Contractubex® Gel for the prevention and treatment of excessive scars

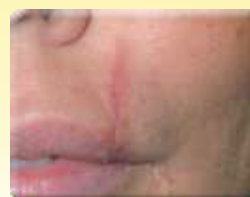

Contractubex® Gel Guideline-compliant scar treatment

- For **postoperative prophylaxis** of hypertrophic scars or keloids, as well for preventing their **recurrence**
- As **supplemental treatment** for active hypertrophic scars
- For **prevention of nonphysiological scar formation** in patients at increased risk of hypertrophic scars
- As **mono- or combination therapy** for immature hypertrophic scars as well as hypertrophic burn scars

Contractubex® Gel Treating scars successfully

- Proven to promote scar tissue elasticity
- Visibly improves scar structure
- Noticeably relieves itching, pain, and feeling of tension

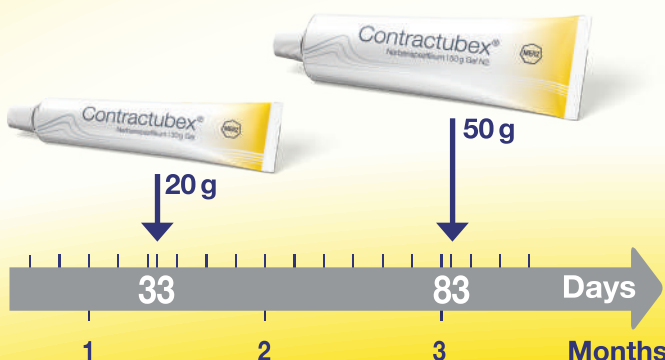

Fresh scar following surgery

After 3-month treatment with Contractubex® Gel

Efficiency up to 3 months:

- A 20 g package of Contractubex® is sufficient for 1 month treatment.

- A 50 g package lasts almost 3 months.

Assumption: 5 cm long scar, twice daily treatment, usage of 0.6 g gel daily
